

Amendment to the Claims:

Please rewrite Claims 5-12 to read as follows:

Claims 1-4 (cancelled).

Claim 5 (currently amended): A deflection yoke comprising:

a coil separator having a rear plate and a neck part which are defined therein and a printed circuit board which is positioned on a side thereof;

at least one horizontal deflecting coil disposed on a circumferential inner surface of the coil separator to produce a horizontal magnetic field and connected to said printed circuit board;

at least one vertical deflecting coil disposed on a circumferential outer surface of the coil separator to produce a vertical magnetic field; and

a compensating means element made of a magnetic material provided in said neck part of said coil separator ~~for compensating~~ which compensates convergence on a screen.

Claim 6 (currently amended): A deflection yoke according to Claim 5, wherein said compensating means is constructed of a pair of iron plates which are attached to one side of said rear plate while wrapping the outer periphery of said neck part in opposite directions with from each other.

Claim 7 (currently amended): A deflection yoke according to Claim 6,  
~~wherein said pair of iron plates are made of a magnetic substance, and wherein each of~~  
said iron plates has a semi-circular configuration about said neck part.

Claim 8 (currently amended): A deflection yoke according to Claim 6,  
wherein said pair of iron plates are fixed in place by ~~using an~~ adherence.

Claim 9 (currently amended): A deflection yoke comprising:

a coil separator having a rear plate and a neck part which are defined  
therein and a printed circuit board which is positioned on a side thereof;

at least one horizontal deflecting coil disposed on a circumferential  
inner surface of the coil separator to produce a horizontal magnetic field and connected to  
said printed circuit board;

at least one vertical deflecting coil disposed on a circumferential  
outer surface of the coil separator to produce a vertical magnetic field;

a ferrite core positioned on the circumferential outer surface of the  
coil separator to reinforce the horizontal and vertical magnetic fields of the horizontal and  
vertical deflection coils; and

a pair of generally semi-circumferential bands made of a magnetic  
substance and positioned on the surface of said rear plate connected with said neck part  
for compensating convergence on a screen.

Claim 10 (currently amended): A deflection yoke according to Claim 5 9, wherein said bands are constructed of a pair of iron plates which are attached to one side of said rear plate while wrapping the outer periphery of said neck part in opposite directions with from each other.

Claim 11 (currently amended): A deflection yoke according to Claim 6 10, wherein ~~said pair of iron plates are made of magnetic substance~~, and wherein each of said iron plates has a semi-circular configuration about said neck part.

Claim 12 (currently amended): A deflection yoke according to Claim 6 10, wherein said pair of iron plates are fixed in place by ~~using an~~ adherence.
